

X1: Distributed Discovery and Social Discovery

All of X1's software creations are designed to help people find and act on information as soon as possible. These two products, Distributed Discovery and Social Discovery, were designed to revolutionize your eDiscovery through 'pre-case assessment' and defensible social collection.

X1 Distributed Discovery

True ECA

X1 Distributed Discovery provides a unique eDiscovery workflow by speeding up the traditional collection and review process. Instantly search and analyze ESI across thousands of custodians before collection for true early case assessment and the most precise collections. Using X1, the amount of data collected is drastically reduced, simultaneously reducing the cost of processing and review.

Upload your data directly into Relativity, Brainspace, or other review platforms.

- Avoid over-collection
- Centrally search distributed endpoints
- Gain instant insight into ESI
- Bypass time-consuming processing and data transferring steps

X1 Social Discovery

Social Collection

Meet the industry's leading application for social media and internet-based search and data collection.

While other solutions don't integrate multiple collection sources, X1 Social allows users to pull data from the top social media sites, websites, and email, then search across their collections from a single interface.

Unlike screenshots, data collected through X1 Social preserves the critical metadata that makes it legally defensible in any court case.

Collect user information from Facebook, Twitter, Instagram, YouTube, Tumblr, Gmail, and more.
